

# Mytonomy's Cloud for Cardiology

The Industry's Most Comprehensive Cardiology Microlearning Video Library

Developed in partnership with leading heart centers, Mytonomy's Cloud for Cardiology holds the most comprehensive collection of cardiovascular and cardiology videos (700+) in the industry, spanning an extensive list of procedures and conditions including CABG, TAVR, electrophysiology procedures, heart failure and a full cardiometabolic library of 200+ microlearning videos, handouts and information sheets.

700+ videos spanning many cardiology conditions and procedures.

- ▶ Clinically accurate
- ▶ Evidenced-based
- ▶ Based on microlearning principles
- ▶ Accessible & actionable content
- ▶ Available in English & Spanish
- ▶ Extraordinary engagement among diverse populations
- ▶ Readily integrates with all major EHR and CRM systems

Including:

- CABG
- Cardiac Catheterization
- TAVR
- Heart Failure
- LVAD
- EP Procedures
- Structural Heart Surgery
- Cardiac Diagnostic Tests
- Diabetes
- Hypertension
- Hyperlipidemia
- Arrhythmia

**Mytonomy is integrated with intelligent nudging to activate patients throughout their care journey and support post discharge Remote Patient Monitoring programs, like those for heart failure and other conditions.**

**Through Mytonomy's Cloud for Cardiology, patients can:**

Gain a Better Understanding of Their Disease and/or Chronic Conditions

Learn What They Need to do to Prep for a Procedure and How to Care For Themselves Afterward

Become Empowered to Become an Active Partner In Their Care

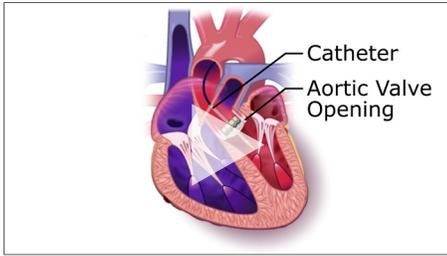

Get Comfortable With Their Care Team and Understand Their Options

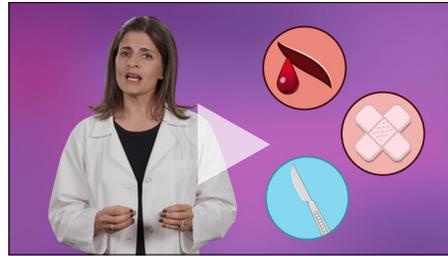

Learn How to Implement Healthy Lifestyle Choices

## Better Understanding Improves Outcomes:

The TAVR Procedure

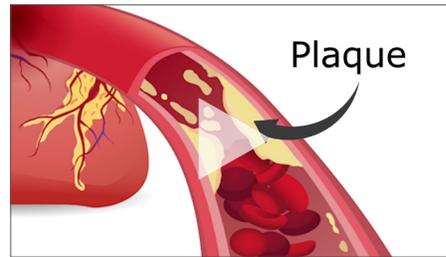

What are Blood Thinners

My Experience with Ablation

Revisión de la presión sanguínea en casa

Shared Decision Making- LDL Cholesterol & Heart Disease

***Mytonomy is driving significant improvements in clinical outcomes and patient experience, validated through multiple IRB studies.***

## Cardiac Case Studies:

The Mytonomy solution was introduced to a high volume CABG center in the northeast.

### WHEN MYTONOMY WAS IMPLEMENTED:

**89% OF PATIENTS SIGNED UP**

**PATIENTS HAD A 95% SATISFACTION RATE**

**THE CENTER INCREASED THEIR HCAHPS SCORE BY 41%**

Additionally, a multi-site study conducted across three major academic centers, showed that using Mytonomy improved patient results in cardiovascular risk factors including A1C, LDL, and blood pressure.

**Along with patient education, Mytonomy features validated cardiac-related surveys that can be deployed through patient portals or sent directly to patients via email or SMS, and yield from patient intake is high in Mytonomy.**

Mytonomy makes accessing its video library easy through its proprietary software platform that integrates seamlessly with a provider's existing network. There are no apps to download or offsite web addresses to learn, making the process of watching videos frictionless for patients.

Videos can automatically be assigned to patients based on existing conditions and/or patient events (admissions, procedures, discharges), and may also be integrated into popular EMRs for clinician ordering.

**The flexible nature of the platform means patients can engage with their care on any device – phone, tablet, computer, or TV in your facility or their living room.**

Custom content for your institution can be produced in Mytonomy's award-winning film studio.
