

Remote Patient Monitoring

Sharecare Clinical Solutions

Results that matter

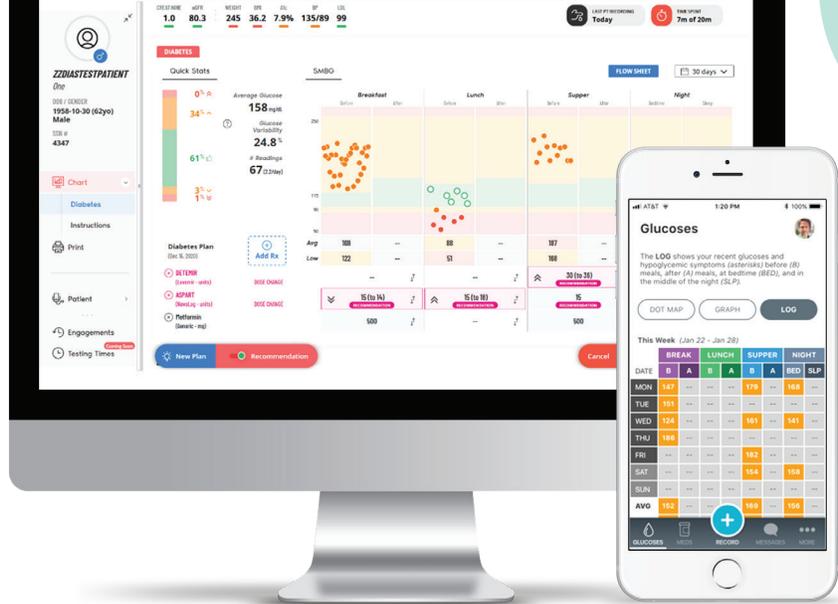

- Higher MIPS & MACRA scores
- Greater revenue opportunities
- Increased patient engagement and access to care
- More productivity by automating administrative tasks
- Reduction in costly emergent events and healthcare costs
- Safely & effectively achieve patient goals with pharmacotherapy decision support

Key features

- EHR integration & note template
- Integrated devices (glucose meters, weight scale, blood pressure monitor)
- Medication alerts & recommendations
- “Red flag” alerts for out-of-range or abnormal results
- Treatment plan updates and reminders from care team

Get paid for RPM

- RPM is reimbursable by Medicare and select private payers with these CPT codes: 99453, 99454, 99457 & 99458
- RPM can be furnished by physicians, other qualified healthcare professionals and/or our clinical staff under general supervision of a physician
- Our team assists with reimbursement optimization, including pitfalls to avoid

Overview

Sharecare Remote Patient Monitoring (RPM) solution is a full-service, EHR integrated solution for diabetes, hypertension, and hyperlipidemia that can help patients and providers achieve improved outcomes that are sustainable and meaningful. Greater continuity in the continuum of care is achieved when our RPM solution is combined with additional Sharecare clinical solutions.

Data-driven decision support

- Data-driven insights help providers deliver timely and appropriate interventions and enable patients and providers to avoid costly complications.
- Dashboard enables providers to efficiently triage patients.
- Individualized medication recommendations, based on the latest clinical guidelines support providers in prescribing, titrating and optimizing medication management.

Personalized insights for patients

- Easy-to-use app automates tracking for accuracy and real-time feedback.
- Color-coded results allow patients to quickly identify high and low results.
- Automated reminders keep patients on track with their care plan and medications.

Provider support

We keep providers at the heart of patient care to foster the provider-patient relationship.

Pharmacotherapy decision support

Our clinical-based algorithms for medications help patients achieve goals rapidly, safely and effectively.

Patient support

Our trained experts use a patient-centered approach to real-time virtual care.
